Read the following passage and mark the letter A, B, C or D on your answer sheet to indicate the best answer to each of the following questions from 23 to 30.

The contemporary employment landscape is witnessing a notable shift in employee behavior, moving away from the previously prevalent trend of 'job hopping'. For years, frequent job changes were often perceived negatively, sometimes even discrediting an employee's commitment. However, recent data suggests a significant decline in voluntary resignations. This new phenomenon, termed 'job hugging', describes a situation where employees opt to remain in their current positions, effectively 'holding tight' to their jobs.

Statistics from the American labor market indicate a substantial decrease in the number of workers quitting their jobs compared to previous years, highlighting this evolving trend. Data from 2024 shows that 39.6 million Americans resigned from their jobs, an 11% drop from 2023 and a significant 22% decrease compared to 2022. This sharp decline reflects a major shift in employee attitudes, with many individuals choosing to "hug" their current jobs rather than risk changing roles.

This hesitation to switch roles is primarily driven by shifting economic realities rather than increased corporate loyalty. Tougher economic conditions, including financial instability, widespread layoffs and a general fear of unemployment, have made job security a paramount concern for many. Consequently, the perceived risks associated with seeking new opportunities often outweigh the potential benefits, such as higher salaries or career advancement. Employees are, therefore, prioritizing stability within their existing companies over the uncertainty of the external job market.

A common characteristic of individuals engaged in 'job hugging' is a heightened aversion to risk-taking in their career decisions. They may continue in roles even when experiencing dissatisfaction, choosing to endure familiar challenges rather than venturing into the unknown. This often involves valuing job security above personal growth or exploring new career paths. For these employees, the fear of a worse outcome in a new environment often compels them to stay put, even when other opportunities might exist. This pattern suggests a strategic decision to minimize exposure to market volatility.

B. The evolving trend in the American labor market is a decrease in job hugging due to new statistics recorded over the previous years.
C. In the last couple of years, the number of workers quitting jobs has soared, indicating a new trend in the American labor market.
D. There are more workers deciding to commit to their jobs in the American labor market, changing the employment trend.

Read the passage and mark the letter A, B, C, or D on your answer sheet to indicate the best answer to each of the following questions from 31 to 40.

The rapid proliferation of artificial intelligence (AI) tools, particularly generative AI, has sparked a

profound debate concerning their impact on human cognition. While celebrated for their capacity to enhance productivity and automate complex tasks, a growing body of research suggests that an over-reliance on these technologies might inadvertently blunt our thinking skills. This apprehension echoes historical concerns, such as Socrates's distrust of the written word, which he feared would diminish memory and intellectual rigor. Though the great philosopher's specific fears about writing proved unfounded, the underlying anxiety about new cognitive technologies and their potential to reshape our mental faculties persists in the age of AI.

Empirical studies are now providing concrete evidence for these contemporary worries. Researchers have observed that even seasoned professionals tend to disengage their critical thinking skills when routinely using generative AI for tasks requiring analysis or synthesis. Furthermore, excessive dependence on AI during learning processes has been linked to reduced brain connectivity and a decrease in the memorability of information. This phenomenon is often attributed to a maladaptive form of "cognitive offloading," where instead of using AI to free up mental resources for higher-order thinking, individuals delegate fundamental cognitive processes entirely. Such delegation, when unchecked, hinders the development and maintenance of essential mental muscles, potentially transforming our minds into mere passive recipients rather than active processors of information.

[I] However, the narrative is not entirely one of decline. Many experts propose that AI, when leveraged judiciously, can serve as a powerful tool for human intelligence. The key lies in shifting from passive consumption to active, critical engagement. [II] Instead of asking AI for complete answers, users can employ it to generate diverse perspectives, identify potential biases, or even challenge their own assumptions. This approach transforms AI from a crutch into a sparring partner, fostering a dynamic interaction that can sharpen reasoning and deepen understanding. [III] Strategies include fact-checking AI outputs, iteratively refining prompts to encourage deeper processing, and dedicating mental effort to understanding why AI provides certain information. The challenge, therefore, is not to reject AI, but to cultivate a mindful approach to its integration into our daily lives and professional practices. [IV]

By understanding the mechanisms of cognitive offloading and consciously designing interactions that promote active learning and critical evaluation, we can harness AI's immense potential without succumbing to its pitfalls. This requires a concerted effort from individuals, educators, and developers to foster "AI literacy" - the ability to effectively and ethically engage with AI technologies. Ultimately, the future impact of AI on human cognition will be less about the technology's inherent nature and more about how we choose to interact with it.

Question 31. The author mentions Socrates's historical concerns in paragraph 1 primarily to _____.

- A. highlight the philosophical debate between ancient and modern thinkers
- B. prove that historical anxieties about technology are always misplaced

- C. suggest that writing, like AI, ultimately harms human memory
- D. demonstrate a constant fear surrounding innovative cognitive technologies

Question 32. Which of the following best summarizes the main idea of paragraph 2?

- A. Experienced professionals are more susceptible to the negative cognitive effects of AI than other people due to the nature of their work.
- B. Empirical evidence suggests over-reliance on AI can impair critical thinking and memory due to improper cognitive offloading.
- C. It has been argued among researchers whether AI tools are inherently detrimental to brain connectivity and memory formation when used constantly.
- D. Cognitive offloading is the use of external tools such as AI to reduce the mental effort needed for a task, thereby lowering cognitive load.

- B. The uncontrolled usage of AI for mental tasks will inevitably impede cognitive growth, making individuals less active in processing information.
- C. Giving mental tasks to AI, without proper oversight, can weaken cognitive development, leading to a state where minds passively accept information instead of actively engaging with it.
- D. The unchecked delegation of mental responsibilities to AI has been reported to lead to a decline in cognitive functions, turning individuals into passive receivers of data.
